Periosteum is a tough thin membrane that makes up the outer layer of bone. It is filled with nerves and blood cells that supply oxygen and nutrients to the cells in the bone, and when you break a bone, the periosteum feels pain. Put this skeleton back together (4) p. Anterior - in front of, or the end that contains an organism's head. Dorsal - referring to the back, or it might seem to be the top if the animal is not upright like a human, but it is its back. Like a dorsal fin on the back of a fish. Intestine, J. spinal cord, D. Arteries, Veins, Capillaries of humans (5) p. See the Apple's yummy frog! I'm not that creative. =d 395. Subphylum Cephalochordata Lancelet (3) p. though the placenta) (7) p. 399. The Circulatory System A closed circulatory system is one where the blood is enclosed in blood vessels. The spinal cord is enclosed by the vertebrae. Arteries, veins, and nerves branch out from the spinal cord. 403-404, Class Agnatha (jawless fish) Lol, Agnatha talked so much, her jaw deteriorated. 400-401. The Nervous System The lobes of a human brain. 416-419a, Perch Dissection Awesome labeled perch dissection, gall bladder, L. Ashe did an awesome job! (10) p. Once we got inside, Steve was promptly renamed, Plain Jane because of the presence of eggs and oviducts and due to the lack of dye! Plain Jane did not have nearly as many eggs as Rainbow Bright. (It kind of looks like broccoli trees.) If someone has asthma, because of the swelling of the bronchial tubes he is only able to take shallow breaths. He will not be able to "exchange oxygen" sufficiently because the oxygen he is trying to breathe in would not get all the way to the aveoli where the exchange between oxygen and carbon dioxide takes place. gonad, H. Ventral - referring to the front, or belly-side of an organism. Posterior - in back of, or the end that contains an organism's tail. Osteocytes are mature bone cells that are surrounded by the osseous matrix. CA Rebro, C. osteoclasts are the sizes that break the old bone so that the new bone can be formed, often for growth or remodeling. The cartilage between every vertebra is for damping and also allows you to tie your shoes! See how the nerves come from your spinal cord until your whole body. The other part is the cerebellum. Estono, E. 422, Sapo's Dissection - Virtual Virtual Sapo Dissection. I could find something so good for all the dissections.) In the upper right corner, click Demo. Looking for the vertebrates in the animal kingdom? They can be found here in Phylum Chordata. Not all these creatures have a backbone like that in this x-ray though; Some have a notochord instead... Similar to scary and vampire lampreias! Only by amusement, check this short video out of a slippery otter! Can you say that we find this creature a bit intriguing? Read about your functions. Czech Pilorica, K. Do not let these great words scare you! Phylum Chordata (Core Dot Uh (Yer Uh Core Dot Dot UH) is a Core Dotta, haha. Members of this subphylum are only a notochord for the first part of their lives during the larval stage. Subphylum Trabrata - the notochords of this subphylum are in a backbone before being shocked or born. Which one are we hint: we do not have a stage LARVAL. (You too. You can see the polych without a label to see if you can name everything. subphylum; The spongy bone endosteum, as it is called in your text, also is called canceled bone. 419-422, Amphibia Amphib means both, sotsalcoetso, sotsalcoetso, sotsalboetsO. p. 18(aierpmaL. adiv laud acifingis aibifnA. adiv acifingis oib; sodal periosteum Osteo/osteum refers to bone. Cytes refers to cells. Peri refers to surrounding something, like the word "perimeter." Osteoblasts are the bone cells that help build new bone matrix. A shark has an anterior dorsal fin and a posterior dorsal fin. This indicates which is in front of the other; they are both on its back. kidney, G. liver, M. Scroll down to see an image of brain lobes. gills endoskeleton made mostly of bone, smooth skin w/ many capillaries and pigments, two pairs of limbs with webbed feet, as many as 4 organs for respiration, three chambered heart, oviparous with external fertilization Phylum Chordata Before we get started, be sure to check out the Book Extras at the Apologia Website, there are many interesting links that go along with our study of Phylum Chordata. If you like to find more information on many of the creatures mentioned in this module, you may want to take a look at ARKive: Images of Life on Earth. The link will take you to the page on Fish, but there are many other creatures covered on this website. (Note: May have some evolutionary content.) There are lots of pictures, videos and all kinds of information including, fact sheet, status, description, range, habitat, threats, etc. (9) p. It feels like closing your nose and breathing with your mouth through a thin straw while something is constricting your chest and lungs. How your lungs put oxygen back into oxygen-depleted blood. (6) p. Note: Dissections are not only to learn about the parts and organs of different animals, but to prepare the student for learning about human anatomy. Since I know at least some of my students will not take the advanced biology, The Human Body, I have included a few things that pertain more to humans than the organism being discussed. Also, I could not find a video about the circulatory system of a fish. Here's a review of a few terms if you are still not quite with them. The spinal cord is the bundle of nerves that extend from the brain and make up the central nervous system. The spinal cord is protected, since it runs in the center of the spine. 393-394, subphylum uracordata sea squirt (2) p. Spinal cord and nerves. Brain and spinal cord. The cerebrum consists of most of the brain, made of different lobes. 401-402, oviparous reproduction (development into an egg, hatched outside the female's body) ovoviviparous (development into an egg, hatched inside the female's body) viviparous (development within the female, gains nutrients, etc. Air Bexder, F. This is " Everything for this post, but don't forget to check out these other great blogs that have resources for module 13: Applies place, SAHM-I-AM, books, flashcards & Games on Quizlet.com Disclaimer: No revenue of any kind was received for the promotion of links and videos embedded in this post. All copyrights on these items remain with the originator! M13 RECAP BLOG Post in Salm-I-Am's vocabulary game - Quizlet, M13 members of Phylum Chordata have vertebrae. That is, some kind of vertebrae. Some have a notochord, which is a difficult and flexible material. In fact, all members of this phylum have an Otochord at some point in their existence. Some will harden on vertebrae, like humans.) This difference is the first level of classification for this phylum. subphylum cephalochordata (Sef uh low nucleus uh point). This subphylum has organisms that will have a Notochord all their lives. Something can also be "before" another part of the body, which means it's in front of it, and "behind" another part of the body would mean it's on her back.
